DETAILED ACTION

Allowable Subject Matter

Claims 1-16 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claims 1 and 8, the prior art of record, specifically U.S. Patent # 6,163,700 to Hussain et al teaches scanning logic within the base station controller scans for the percentages of radio resources used by public mobile subscribers and the localized service area mobile subscribers. More specifically, Hussain teaches an adaptive method of reserving radio resources to localized service area mobile subscribers as needed where a base station controller within the localized service area stores a radio resource table that has a list of radio resource usage percentages and associated reservation percentages for localized service area mobile subscribers and a list of radio resource usage percentages for public mobile subscribers.

However, there is a clear distinction in Hussain from the present application, in that the scanning for the percentages of radio resource is quite different from measuring radio resource used by a transmission. In other words, Hussain teaches traffic measurements similar to previously cited prior art documents. Specifically, the traffic measurement is conducted without any knowledge of logical associations between the traffic components. Where the present invention claims measuring which radio resources are used in a transmission and that a transmission has to be regarded as a communication session. This represents a logical association or a logical context between an individual terminal and network entities.

Art Unit: 2684

In particular, the prior art of record either alone or in combination with any of the cited prior art fails to disclose measuring parameters of circumstances of a transmission in a system, wherein the transmission is a communication session that represents a logical association between a terminal and at least one of a plurality of network entities where said parameters being at least radio resources used by said the transmission in a system, data service units used for said the transmission in a system, and transmission characteristics used by said the transmission in a system, wherein said measuring is carried out collectively.

Regarding claim 15, see reasons for allowance in office action dated 12/17/02.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
